IAIN CLIFFORD

THE PRESIDENT OF THE
REPUBLIC OF OLD SOULS.

1. A World Under Control

Across the world, governments are tightening their grip. Under the banners of sustainability, climate transition, and global governance, a new control system is being constructed—brick by brick—through **UN Agenda 2030, digital ID, and central-bank digital currencies.**

Every citizen will soon be scored, measured, and ranked. Those whose social credit is too low will see their **bank access restricted, their transactions flagged, and their mobility curtailed.**

Ownership of land and property is already being replaced with “licence to occupy” frameworks, digital deeds, and registries tied to biometric identity.

The message is simple: *Control the ID, control the assets.*

2.

The Fatal Illusion of Ownership

For centuries, ordinary people have believed that registration equals ownership.

It does not.

When you *register* property, land, a vehicle, or even a business, you surrender **legal title** to the State.

What remains is *equitable* title—the right to use, but not to own.

With ownership comes liability: taxes, regulation, forfeiture.

With registration comes dependency: permission to act, renewed annually through fees and compliance.

Those who play by these rules remain tenants on the Crown's Monopoly board of commerce—renting back what they think they own.

3.

The Private Remedy of the Elites

Dynastic families, sovereign wealth foundations, and the global super-rich learned long ago that freedom lies in **separation of ownership from control**.

Their maxim is simple: Own Nothing — Control Everything.

They achieve this through the **International Private Trust**, a jurisdiction in its own right—standing outside statutory codes, tax acts, and administrative reach.

It is the unseen fortress behind every enduring fortune.

Within this structure:

- **Legal title** resides with the trust.
- **Liability** resides with the trustee.
- **Benefit** resides with the living men and women.

Thus, the trust interfaces with the Monopoly board, while the beneficiaries sit safely beyond it.

4.

Introducing the Asset Shelter Protocol

The **Asset Shelter Protocol** is the modern application of that ancient principle.

It centres on a **foreign grantor trust** with an **EIN issued by the IRS**, recognised internationally yet classified as a **foreign nation** for taxation purposes.

It pays no tax, reports to no domestic registry, and can hold any lawful asset worldwide.

Structural Roles

Grantor / Trustee

The *body-corporate* name printed on the birth certificate, passport, and driving licence. Acting as trustee and grantor, it bears interface liability while operating entirely under private contract.

Beneficiary

The *living man or woman*—the flesh-and-blood being who enjoys all benefits without exposure.

Trust

A 98-Series International Grantor Trust recognised under foreign jurisdiction with IRS EIN classification, functioning as a sovereign trust-nation.

Through this structure, every member can operate banking, property, and business activity privately, outside the surveillance perimeter of the digital-ID regime.

5. How the Protocol Protects You

5.1 Shield Against Digital Control

When national systems migrate to biometric ID and programmable money, accounts held by private individuals will be programmable—approved or denied by algorithm.

An international trust account, however, sits *outside* that matrix.

It is a private-contract account operating through correspondent relationships within the Federal Reserve System yet controlled by the trustee under private law.

5.2 True Title to Property

The trust holds **fee-simple title**—the highest form of ownership.

The living beneficiary retains use and benefit, while governments, tax authorities, or creditors hold no claim.

5.3 Operate a Business through the International Trust

The **98-Series International Grantor Trust** is not only a vehicle for asset protection—it is also a fully functional platform for **business operations**. Because it is classified as a **foreign trust** with no U.S. person status, it is **exempt from domestic income tax reporting**.

Key Benefits:

- **Tax Exemption:** The trust is not subject to U.S. income tax or reporting obligations. All income earned through business activities is retained within the trust without triggering tax liabilities.
- **Trading-as Name:** The trust can operate under a "Trading As" (T/A) name, allowing it to invoice clients, receive payments, and conduct commerce globally.
- **Global Reach:** The trust can operate in any jurisdiction, offering goods and services without needing to register locally or disclose assets.
- **Privacy & Confidentiality:** Business income, assets, and operations are shielded from public registries, corporate databases, and government oversight.
- **No Reporting of Income:** Since the trust is foreign and tax-exempt, it does not file income reports or financial statements with domestic authorities.

Legal Positioning:

The trust is a **sovereign structure**. It interfaces with the commercial world through private contract, not statutory registration. This means:

- No corporate registry filings
- No public ownership disclosures
- No income tax obligations
- No asset seizure risk

Integration with the Republic of Old Souls

Members and Envoys of the **Republic of Old Souls (ROS)** operate under private ecclesiastical jurisdiction. Their **recoupments of bank payments and mortgages**, processed through the **ROS Ecclesiastical Trust**, can be received directly into each member's **International Trust bank account**.

These accounts are positioned within the **Federal Reserve System** via correspondent channels, ensuring seamless USD settlement and worldwide utility.

Because of the significant recoupment flows, members will receive a curated list of **approved private banks**—each capable of providing debit-card access, multi-currency capability, and confidential administration.

These accounts represent the member's point of interface with the Monopoly board of commerce.

Spending through them enables recoupment cycles while preserving privacy and jurisdictional independence.

7. Why Fee Simple Matters

Holding fee-simple title through an international trust converts property from Crown tenancy to true ownership. Taxes, council levies, and statutory duties attach to the registered titleholder—no longer you.

Within the trust:

- **Legal title** = Trust
- **Use & Enjoyment** = Beneficiary
- **Liability** = None beyond fiduciary duty

This is the legal foundation of genuine freedom—*the ability to possess without exposure.*

8. Operating the Asset Fortress

1. **Establish the Trust** – A 98-Series International Grantor Trust is formed; an EIN is obtained from the IRS.
2. **Appoint the Trustee** – The body-corporate persona acts as trustee/grantor.
3. **Fund the Trust** – Assets, property, and recoupments are transferred to the trust's ownership ledger.
4. **Open the Bank Facility** – Republic of Old Souls coordinates bank account opening with approved banks.
5. **Operate Privately** – All personal and business banking, property management, and investment flows occur through the trust.
6. **Distribute Benefits** – The living man or woman draws benefits as beneficiary, enjoying use without liability.
7. **Facilitation of Fee Simple title over land and property.**

9. Comparative Outcomes

10. From Dependency to Sovereignty

The choice is stark. Remain within the Crown's system—registered, taxed, and monitored—or step into the realm of private sovereignty.

The **Asset Fortress Protocol** is not a theory; it is a working framework used quietly by the world's most powerful families.

It enables you to:

- Reclaim control of your property.
- Protect wealth from seizure or taxation.
- Conduct commerce privately.
- Live freely despite digital ID enforcement.

Within the Protocol, your trust plays the game on the Monopoly board while you live off-board—safe, sovereign, and unassailable.

11. Next Steps for Members & Envoys

1. **Education & Onboarding** – Study the Asset Fortress materials; understand the trust roles.
2. **Trust Formation** – Establish your International Grantor Trust and obtain the IRS EIN.
3. **Bank Selection** – Choose from the vetted list of suitable private banks connected to the Federal Reserve System.
4. **Asset Transfer** – Move property, business holdings, and recoupments into the trust ledger.
5. **Operational Integration** – Use the trust account for all commercial interface activities.
6. **Ongoing Support** – Liaise with ROS Trust Administration for compliance, accounting, and banking updates.

11. Conclusion — Building Your Fortress

As the global control architecture advances—digital ID, programmable money, ESG scoring—the walls of financial freedom close in.

Yet freedom has always belonged to those who understand law, jurisdiction, and structure.

The **Asset Fortress Protocol** re-opens that gate:+

A private, lawful pathway to hold, use, and enjoy assets without surrendering ownership to the Crown or control to algorithms.

Own nothing, control everything — and live free.

Prepared for the Republic of Old Souls Members and Envoys
